Abstract of the Disclosure

The MAG expression promoter of the present invention contains a compound of the formula (I)

wherein each symbol is as defined in the specification, an optically active form thereof or a pharmaceutically acceptable salt thereof. As a compound of the formula (1), 4-[α-hydroxy-5-(1-imidazoly1)-2-methylbenzy1]-3,5-dimethylbenzoic acid is exemplified. The MAG expression promoter of the present invention is useful as an agent for the prophylaxis and/or treatment of a disease of mammals inclusive of human humans, which mainly presents hypomyelination, further, dysmyelination or demyelination.
